Here's Your App Roadmap

Our Recommendations:

Now that you have a plan for your app, you may feel overwhelmed because there's so much to learn!

Don't worry, we have a step by step plan for you to follow.

There is no one-size-fits-you, but we've given you short-cuts and feel-keep-something.

Above this page, we've broken down the steps.

We [Crystal](#) [Lucy](#), and the team building Digitsu for over 6 years and we've found that beginners find the next success by following a learning path like this:

Beginner:

Fundamentals User Interface Navigation Animation Multimedia

Intermediate:

Databases Mapping and GPS Phone Features Design and Prototyping Monetization

Advanced:

Notifications User Login and Accounts

Fundamentals

All iOS/iPhone/iPad/Mac apps are based around beginner videos and lessons you can learn and have your iOS development foundation.

How to use Xcode

Apple gives us a free program called **Xcode** where you can see a cloud of things and the interface builder to drag and drop the UI. Xcode is the main place we use.

For writing the code logic of your app, you also do that inside of Xcode.

Here are some resources to check out:

- Xcode Help Guide
- Apple Tutorial for Beginners

How to read and write Swift code

In order to operate Xcode, you need to know how to read and write Swift code for your app. Don't worry, it's not hard once you get started!

Here are some resources to check out:

- Apple's Swift Learning Guide
- Learn Swift in Beginners

How to lay out your interface

Although Xcode gives you a drag and drop builder to create the screen that you see, you still need to know how to lay out and arrange the user elements on the screen of an app.

Xcode uses a system called **Auto Layout** to specify rules and positions of the user elements.

- Apple's Auto Layout Guide

Design and Prototyping

Design is a large part of what will set your app apart from the competition! Make sure you invest some time in this area and learn the basics of design principles on the other hand is not absolutely necessary.

- Design Tips

User Login and Accounts

You'll need your users to create an account or to login if your app allows people to create accounts, like a Twitter people. This is a large topic and there's many different ways to do it and there's also a lot to specific personal account.

I want to learn design

Do you hating app design, I recommend Crystal's Class.

Here are some design tools to check out:

- Sketch App
- Pixelmator
- Adobe XD Tool
